

MUHAMMED QAIS

Full-stack Developer | Distributed Systems · Real-Time Applications · Node.js

+91 7025211871 · qaismon127@gmail.com · linkedin.com/in/muhammed-qais-mon · github.com/qaismon · qaismon.github.io/portfolio · Kerala, India

PROFESSIONAL SUMMARY

Full-stack Developer focused on building **scalable backend systems, real-time applications, and fault-tolerant distributed workflows** using Node.js, React, MongoDB, Redis, and modern cloud tooling. Hands-on experience developing production-grade systems involving **concurrency handling, asynchronous job processing, real-time communication, payment orchestration, and API optimization**. Strong understanding of system reliability, performance tuning, and distributed architecture patterns through project-driven engineering and real-world deployments.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript
Frontend	React.js, Next.js, Redux, Tailwind CSS
Backend	Node.js, Express.js
Database	MongoDB, Redis, PostgreSQL
Real-Time	WebSockets, Socket.io, BullMQ
DevOps	Docker, AWS EC2, PM2, Nginx, Git, GitHub, Postman
Concepts	Distributed Systems, System Design, Concurrency Handling, API Optimization, Load Testing (k6), RBAC, End-to-End Encryption

PROFESSIONAL EXPERIENCE

Software Developer Intern | Bridgeon Solutions | Kerala, India Aug 2025 – Present

- Designed and developed **production REST APIs** supporting authentication and real-time workflows.
- Optimized MongoDB queries and indexing**, reducing API response time by ~25%.
- Built **asynchronous event-driven workflows** for real-time features using Node.js and Socket.io.
- Diagnosed and resolved backend issues across staging and production, improving **system reliability**.
- Contributed to backend modules deployed across multiple internal systems; participated in **code reviews and Agile sprint cycles**.

Customer Support Associate | Elaf Fresh E-Commerce | Dubai, U.A.E Apr 2022 – May 2023

- Handled 50+ customer interactions per day, identifying recurring platform bugs and UX issues.
- Reported 40+ actionable bugs to development teams, acting as a structured QA bridge between users and engineers.
- Reduced average issue resolution time by streamlining communication between support and dev teams.

TECHNICAL PROJECTS

Seatzo – Distributed Event Ticketing Platform | React, Node.js, Express.js, MongoDB, Redis, Stripe, BullMQ | seatzo.vercel.app | [Github](#)

- Built a full-stack ticket booking platform with **distributed Redis-based seat locking** to prevent double booking during **concurrent seat selection**.
- Implemented **saga-based payment orchestration using BullMQ with compensating transactions** for booking rollback and failure recovery.
- Designed **real-time seat synchronization** with polling, automatic lock expiry handling, and multi-tab booking protection.
- Developed secure **Stripe payment workflows** with webhook verification, idempotency handling, and QR-based ticket generation.

- Built role-based dashboards for customers, organisers, and admins with booking analytics and ticket verification workflows.
- Implemented **JWT authentication with refresh token rotation, Google OAuth login, and protected route authorization**.

RevChat – AI Code Review & Collaboration Platform | Next.js, Node.js, MongoDB, Socket.io, Groq AI | revchat.onrender.com | [Github](#)

- Designed and deployed a real-time messaging system supporting **concurrent users**.
- Achieved **~500ms latency** (~80–90 req/sec) through optimized async backend handling.
- Implemented end-to-end encryption (**RSA + AES**) for secure peer-to-peer communication.
- Built WebSocket-based features: typing indicators, read receipts, file/voice messaging with cloud storage.
- Integrated Groq AI for code review generating structured feedback in **under 2 seconds**.
- Designed multi-user group sessions with **role-based access control (RBAC)** and **Redis-backed session management**.
- Deployed on **AWS EC2** with Nginx as reverse proxy and PM2 for process management.

Gainlabz – Full Stack E-Commerce Application | React, Node.js, Express.js, MongoDB | gainlabz.onrender.com | [Github](#)

- Built a full-stack e-commerce platform covering product catalog, cart, orders, and authentication flows.
- Developed **10+ REST APIs** and optimized MongoDB queries, cutting response time from **~3.8s to 200–500ms**.
- Implemented **JWT-based auth** with secure session handling and MVC architecture for maintainability.
- Load-tested core APIs using k6 for concurrent users, achieving **0% failure rate** on all endpoints.

KEY ACHIEVEMENTS

- Improved backend response time from **~3.8s to ~200–500ms** through query optimization and connection pooling.
- Load-tested APIs with k6 - **0% failure rate** on core endpoints across two production level projects.
- Deployed and managed real-time applications end-to-end on **AWS EC2** with Nginx and PM2.
- Identified CPU-bound vs IO-bound operation patterns through systematic API performance profiling.

EDUCATION & LEARNING

Westford University College — BSc. Business Management (In Progress)

Sharjah, UAE

Dayapuram Residential School — High School Graduate

Kerala, India

Self-Study & Online Courses:

- Full-Stack JavaScript (Node.js, React, MongoDB) — Udemy / ZTM
- AWS Cloud Practitioner Essentials — AWS Skill Builder (ongoing)
- Docker & Container Orchestration — self-study with hands-on project deployments
- System Design & Scalability — study of distributed systems patterns and concurrency models
